

Basic Epidemiology

COURSE DESCRIPTION

This program is designed for the participants to be acquainted to be on the field of epidemiology to understand the basic concept. The program will teach the basic research design used in public health. It will be beneficial for public health practitioners, student to learn about the basic research materials. The term epidemiology is now widely applied to cover the description and causation of not only epidemic disease, but of disease in general, and even many non-disease, health-related conditions, such as high blood pressure, depression and obesity. Therefore, this epidemiology is based upon how the pattern of the disease causes change in the function of human beings.
